

PolicyGuardAI HR — HR Policy Manual

15-page generalized policy reference • employment lifecycle, operations, technology and employee support

Generalized from the supplied NASSCOM Human Resource Policy Manual. Legacy timings, amounts, grades, names and approval titles are converted into configurable HR-policy concepts.

Purpose

Provide a centralized framework for employment, attendance, travel, leave, recruitment, onboarding, performance, technology, confidentiality, information security, benefits, separation, rewards and employee assistance.

PolicyGuardAI architecture

Organize every policy into **objective, scope, eligibility, rule, procedure, approval, evidence, exception, escalation and records**.

Lifecycle

Recruit → onboard → manage attendance/leave → develop/performance → reward/benefits → transfer/relocate → separate → retain required records.

Governance

Policies may be revised or replaced. The AI must retrieve the current effective version and should not silently use an older rule.

Answer format

Return **what the policy says + eligibility + next step + approval/evidence + exceptions + HR contact**.

PolicyGuardAI HR • Values, Behaviours & Workplace Culture

Source values

- Trust, fairness, transparency and accountability.
- Integrity and confidentiality.
- Leadership, responsiveness and ownership.
- Passion, continuous learning and stakeholder focus.
- Respect, open communication and recognition.
- Teamwork and knowledge sharing.

Behavioural expectations

Employees are expected to take ownership, use organizational resources judiciously, support colleagues, give/receive constructive feedback and follow policies.

HR use cases

PolicyGuardAI can explain workplace expectations, manager responsibilities and the correct policy route for suspected misconduct.

Do not confuse

Values are guiding principles; they are not automatically a disciplinary rule unless linked to a specific policy obligation.

PolicyGuardAI HR • Working Hours, Attendance & Punctuality

Source pattern

The manual defines normal working hours, flexi-timing options, minimum daily expectations, attendance recording and manager notification for late arrival, external meetings or travel.

Generalized rules

- Follow assigned working hours and attendance procedures.
- Approved flexibility must maintain required coverage and predictability.
- Inform the manager when late, out for official work or otherwise unavailable.
- Record attendance through the approved mechanism.
- Repeated late coming/early departure may trigger corrective action.

PolicyGuardAI fields

Employee schedule, location, attendance event, approved flexibility, manager notification, exception reason and policy version.

AI response

Do not apply a legacy time universally. Retrieve the employer's current working-hours policy for the employee's location/role.

PolicyGuardAI HR • Business Travel & Expense Governance

Objective

Make official travel convenient, business-appropriate and cost-effective while maintaining approval and reimbursement controls.

Core controls

- Travel should serve a legitimate business requirement.
- Plan in advance where practical.
- Obtain required approval before booking.
- Use approved travel channels/providers where required.
- Claim only reasonable eligible expenses with supporting records.
- Explain and obtain approval for itinerary changes or exceptions.

Expense evidence

Travel request, purpose, dates, destination, approval, ticket/boarding evidence, hotel invoice, local travel receipts and expense claim.

AI output

Classify an expense as **eligible / potentially eligible / excluded / missing evidence** and explain the policy basis.

PolicyGuardAI HR • Leave Management

Leave categories

The source covers earned/annual leave, maternity, paternity, advance leave, leave without pay, transfer/relocation leave and leave encashment.

General conditions

- Apply in advance when reasonably possible.
- Obtain approval from the designated authority.
- In emergencies, inform the supervisor promptly and complete the formal record afterward.
- Maintain a centralized and auditable leave record.
- Apply current eligibility and operational rules.

Family-related leave

Maternity and paternity/adoption provisions should be configured against the employer's current policy and applicable law. Do not hard-code historical entitlements.

AI handling

Check eligibility → balance → notice → approving authority → documentation → overlap/operational constraints → final status.

PolicyGuardAI HR • Recruitment, Selection & Temporary Workforce

Recruitment principle

Use job-relevant requirements, structured selection and documented approvals. Equal opportunity should be embedded in sourcing and selection.

Workflow

Approved requisition → role definition → sourcing → screening → structured interview → lawful reference/background checks → approval → offer → joining.

Temporary staff / interns

Use separate eligibility, engagement terms, supervision and confidentiality controls.

AI support

- Draft screening criteria from approved job descriptions.
- Summarize candidate evidence against job criteria.
- Detect missing interview evidence or inconsistent scoring.
- Flag possible bias or irrelevant/protected attributes.

Human control

AI recommendations must not become automatic hiring decisions.

PolicyGuardAI HR • Internal Job Posting, Induction & Joining

Internal mobility

Internal job postings create visibility of opportunities and support career movement. Selection should use approved role criteria and performance/potential evidence.

Induction objective

Help new employees understand the organization, values, structure, role expectations and HR policies.

Day-one checklist

- Joining documentation and employment records.
- Workspace/equipment and access.
- Official email and systems access.
- Policy orientation and acknowledgement.
- Team/function introductions and key contacts.

PolicyGuardAI onboarding

Provide a role/location-specific checklist while retrieving only policies the employee is authorized to see.

Evidence

Joining date, completed forms, acknowledgements, equipment issuance, access provisioning and mandatory training.

PolicyGuardAI HR • Performance Management, KRA & Career Development

Performance objective

Connect organizational objectives with individual goals and support a performance-driven culture.

SMART goals

Goals should be **Specific, Measurable, Achievable, Realistic and Time-Bound**, aligned to role and organizational goals.

Review process

- Employee self-reflection/self-appraisal.
- Manager/appraiser assessment.
- Reviewer input where applicable.
- Two-way performance discussion.
- Evidence and facts supporting achievement.

Career development

Performance inputs may inform training, coaching, mentoring, job rotation, job enlargement and promotion.

AI support

Summarize documented achievements, identify missing evidence and suggest development themes. Never fabricate performance evidence or decide compensation/promotion.

PolicyGuardAI HR • Learning, Training & Development

Learning principle

Employees should have opportunities to improve skills relevant to current and future responsibilities. Training needs can be identified from performance discussions and changing business requirements.

Development methods

- Formal training/workshops.
- Coaching and mentoring.
- Job rotation and job enlargement.
- Self-directed learning and knowledge sharing.

PolicyGuardAI learning assistant

Map role/skill gaps to approved learning resources and distinguish mandatory training from recommended development.

Training governance

Track assignment, due date, completion, evidence and overdue status. Escalate mandatory training gaps according to policy.

Fairness

Learning access should be consistent with policy and not denied on discriminatory grounds.

PolicyGuardAI HR • Technology, Laptop, BYOD & Information Security

Device controls

The source covers company laptops, temporary/pool devices, mobile devices and BYOD. Personal devices may require approval and security controls before corporate access.

General controls

- Use approved devices and networks.
- Keep systems/security software updated.
- Protect devices with authentication.
- Report loss or theft immediately.
- Wipe corporate data before disposal/transfer where required.

BYOD

Personal-device access should be governed by approval, security baseline, data separation and remote-wipe capability where applicable.

PolicyGuardAI

Never expose credentials or secrets. Route security incidents to IT/Security rather than treating them as routine HR questions.

PolicyGuardAI HR • Confidentiality, Social Media & Communications

Confidentiality

Safeguard official documents, records, databases, research, policy information and other confidential material. Departing employees must not retain or forward protected information.

Reporting

Suspected confidentiality violations should be brought to HR or the designated responsible function.

Social media

- Use workplace professionalism standards online.
- Do not publish internal meetings, emails, memos or internal documents not approved for external distribution.
- Use authorized official accounts for official communications.

AI-specific rule

Do not upload HR records, employee complaints, confidential documents or company/customer secrets into an AI system unless the workflow is explicitly approved for that data.

PolicyGuardAI HR • Relocation, Transfer, Dress Code & Benefits

Relocation/transfer

Define eligibility, approval, effective date, location, reporting relationship, relocation support and any applicable leave/reimbursement.

Dress code

Apply presentation standards consistently and reasonably, with role/location context and appropriate accommodations.

Benefits

The source contains a benefits section. For PolicyGuardAI, benefit rules should be configurable, versioned entitlements rather than fixed universal values.

AI answer pattern

Identify employee status → benefit category → eligibility → effective date → required documentation → approval/claim route.

Avoid

Do not assume an old manual's amount, grade, city or eligibility rule remains current.

PolicyGuardAI HR • Retirement, Exit, Termination & Final Settlement

Separation types

Model resignation, employer-initiated termination, retirement, end of contract and other separation scenarios separately because notice and approvals may differ.

Exit controls

- Record resignation/termination notice.
- Confirm last working day and handover.
- Recover company property and access.
- Protect confidential information after exit.
- Complete final settlement and documentation.
- Conduct exit interview where required.

Notice period

Retrieve the employee's actual contract/current policy rather than assume a universal notice period.

Final settlement

Check outstanding leave, advances, reimbursements, company property and other adjustments according to current policy and law.

AI boundary

Termination recommendations are high-impact decisions and must remain under authorized human/HR/legal control.

PolicyGuardAI HR • Rewards, Recognition, Honorarium & Employee Assistance

Rewards & recognition

Recognition should connect to meaningful contribution, performance, teamwork, values or impact, with transparent eligibility and approval.

Honorarium

The source distinguishes participation on behalf of the organization from participation in a personal capacity. Payment/fees and expense treatment can differ.

Governance

Require disclosure and appropriate approval for external committees, boards, events or speaking engagements where organizational representation is involved.

Emergency assistance

The manual provides a framework for exceptional financial assistance for unforeseen personal emergencies, subject to eligibility, approval, documentation and repayment rules.

AI handling

Treat assistance requests as sensitive, minimize exposed personal information and route eligibility/approval to authorized HR/Finance personnel.

PolicyGuardAI HR • PolicyGuardAI HR Workflow, Governance & Source Boundary

End-to-end workflow

Question → context identification → current policy retrieval → eligibility check → rule/exception extraction → evidence → approval owner → answer/action → escalation → audit.

High-impact routing

- Termination, discipline, discrimination/harassment, POSH, safety emergencies, significant privacy incidents and legal questions → authorized human functions.

Knowledge-base metadata

policy_id, title, version, effective_from, effective_to, scope, employee_type, location, eligibility, rule, exception, approval, evidence, escalation, source_page.

Quality controls

- Cite exact policy sources.
- Detect conflicts and outdated versions.
- Never invent missing values.
- Log retrieval and decision context.
- Continuously test edge cases.

Source boundary

This is a generalized synthesis of the supplied HR Policy Manual's structure and major controls, not a replacement for the employer's current policy, employment contract or applicable law.

Source basis: supplied NASSCOM Human Resource Policy Manual (64 pages), covering attendance, travel, leave, recruitment, induction, performance, technology, confidentiality, social media, benefits, exit, rewards, honorarium and emergency assistance.
